## **Essential Question**

How can you classify, add and subtract polynomials?

# POLYNOMIAL

\* Sum of one or more monomials

# TERMS:      NAME:      EXAMPLE:

polynomial

1      monomial

2      binomial

3      trinomial

Polynomial ←  $4x^4 + 7 - 5az^3 + b^2$

## Classifying Polynomials

**Monomial has one term**

**Binomial has two terms**

**Trinomial has three terms**

**Polynomial when it has more than three terms they are just called polynomials**

Classifying by number of terms...

Monomial

$$\begin{array}{l} \underline{14a^2} \\ \underline{7x} \\ \underline{13} \\ \underline{-4xy^3} \end{array}$$

Binomial

$$\begin{array}{l} \underline{\frac{x}{2x} - \frac{1}{6}} \\ \underline{13x^7 + 4x} \end{array}$$

Trinomial

$$\begin{array}{l} \underline{1} + \underline{y^3} + \underline{y} \\ \underline{6x^2} + \underline{7x} - \underline{4} \end{array}$$

Polynomial

$$\begin{array}{l} \underline{x^2} - \underline{3x^5} + \underline{x} - \underline{11} \\ \underline{2xy} + \underline{9x} + \underline{y} - \underline{8} \\ \underline{2a} + \underline{3b} - \underline{4c} + \underline{5d} - \underline{6e} + \underline{7} \end{array}$$

## Standard Form...

Order terms from largest to smallest exponent on the variable

Ex:

The diagram shows two polynomials in standard form. The first polynomial is  $6x^8 - 7x^2 - 5x + 8$  and the second is  $4x^3 + 2x^2 - 3x + 1$ . In both, the coefficients (6, 7, 5, 4, 2, 3) are underlined in blue. In the second polynomial, the constant term (1) is also underlined in red. A black arrow points to the first polynomial. Blue arrows point from the underlined coefficients to the word "coefficients" and from the underlined constant to the word "constant".
